This report is the international pro- Authority under Article 35 and tr	•		is International Preliminary Examining 36.			
2. This REPORT consists of a total of 3 sheets, including this cover sheet.						
3. This report is also accompanied by ANNEXES, comprising:						
						
and/or sheets	sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).					
sheets which	supersede earlier sheets, bu		rity considers contain an amendment that goes			
· ·		application as file	ed, as indicated in item 4 of Box No. I and the			
	Supplemental Box.					
b (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s))						
, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).						
4. This report contains indications	relating to the following item	18:				
Box No. I Basis						
Box No. II Priorit	Priority					
Box No. III Non-e						
Box No. IV Lack						
Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial						
	applicability; citations and explanations supporting such statement Box No. VI Certain documents cited					
Box No. VII Certai	Certain defects in the international application					
Box No. VIII Certai	in observations on the interna	ational application

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FI 2004/050110

Box	No. I	Basis of the report
1.		regard to the language, this report is based on the international application in the language in which it was filed, unless vise indicated under this item.
		This report is based on a translation from the original language into the following language, which is the language of a translation furnished for the purposes of:
•		international search (under Rules 12.3 and 23.1(b))
		publication of the international application (under Rule 12.4)
		international preliminary examination (under Rules 55.2 and/or 55.3)
2.	furnish	regard to the elements of the international application, this report is based on (replacement sheets which have been shed to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed were not annexed to this report):
i		the international application as originally filed/furnished
	\boxtimes	the description:
		pages 1-12 as originally filed/furnished
		pages* received by this Authority on
	N 7	pages* received by this Authority on
	\boxtimes	the claims:
		pages as originally filed/furnished
		pages* as amended (together with any statement) under Article 19 pages* 14-16 received by this Authority on 24.01.2005
		pages* received by this Authority on
,	∇	the drawings:
ľ		pages 1-4 as originally filed/furnished
		pages* to originary free received by this Authority on
		pages* received by this Authority on
		a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.
3.		The amendments have resulted in the cancellation of:
		the description, pages
		the claims, Nos.
		the drawings, sheets/figs
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
	 1	
4.		This report has been established as if (some of) the amendments annexed to this report and listed below had not be made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rt 70.2(c)).
		the description, pages
		the drawings, sheets/figs the sequence listing (specify):
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
*	If ite	em 4 applies, some or all of those sheets may be marked "superseded."

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/FI 2004/050110

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement Statement Novelty (N) Claims 1-15 YES Claims NO Inventive step (IS) Claims 1-15 YES Claims NO Industrial applicability (IA) Claims 1-15 YES Claims NO

2. Citations and explanations (Rule 70.7)

Documents cited in the International Search Report:

D1: US 5738760 A D2: US 4881327 A D3: US 5370289 A

The cited documents represent the general state of the art. The invention defined in claims 1-15 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed equipment for leading a web tail with a flow of air in a paper machine. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-15 is novel and is considered to involve an inventive step. The invention is industrially applicable.

Į-'

CLAIMS

- Equipment for leading a web threading tail in a paper 1. machine, which equipment includes at least two sequential 5 surfaces (11) in the direction of travel of the web threading tail (10), between which a nozzle (12) is arranged in order to form a directed air blast and thus to transport the web threading tail (10), being lead onto the first surface (11) in the direction of travel of the web threading tail (10), onwards 10 to the following surface (11), characterized in that the equipment includes at least two cellular elements (13), arranged in a staggered manner relative to each other, so that the nozzle (12) is the gap (14) formed between the elements (13) and the surface (11) is the wall on the side of the said 15 gap (14) of the walls delimited by the element (13), and the elements (13) are arranged as an excess pressure chamber for distributing air inside the elements (13) from one element (13) to another.
- Equipment according to Claim 1, characterized in that 20 2. the sequential elements (13) are fitted detachably to each other using connector devices (15), for setting the size and shape of the gap (14) as desired, by altering the mutual position and alignment of the elements.

3.

- Equipment according to Claim 1 or 2, characterized in that the element (13) is a duct of sheet metal with a crosssection of an essentially rectangular shape, which is arranged to be closed at at least one end with an end piece (17), and 30 into which the air is arranged to be led.
 - Equipment according to any of Claims 1 3, character-4. ized in that the length of the element (13) is 50 - 400 mm, preferably 100 - 300 mm.

25

- 5. Equipment according to any of Claims 1 4, characterized in that, after the gap (14) in the direction of travel of
 the web threading tail (20), there is a lubrication zone (19)
 in the wall forming the surface (11), for leading air from
 inside the element (13) between the web threading tail (10) and
 the surface (11).
- 6. Equipment according to any of Claims 1 5, <u>character-ized</u> in that, before the nozzle (12) in the direction of travel of the web threading tail (10), there is an exhaust zone (20) arranged in the surface (11) for leading the air away from the element (13) between the web threading tail (10) and the surface (11).
- 15 7. Equipment according to Claims 5 or 6, characterized in that the zones (19, 20) formed of gaps or holes extend over the entire width of the element (13) and that their length is 5 30 %, preferably 10 20 % of the length of the element (13).
- 20 8. Equipment according to any of Claims 1 7, <u>character-ized</u> in that each element (13) is essentially identical and that in at least one wall of the element (13) there is an opening (22), which is arranged to be filled with a connection (23) for leading air into the element (13), or with a support bracket (24) for supporting the equipment from the paper machine, or with a plug (25), which closes the opening (22).
- 9. Equipment according to any of Claims 1 8, characterized in that height of the gap (14) is 0,5 10 mm, preferably
 30 1 4,5 mm, in which case the velocity of the air discharging
 from the gap (14) from inside the element (13) at an excess
 pressure of 1 30 kPa will be restricted to the range 40 200
 m/s.

- 10. Equipment according to any of Claims 1 9, <u>character-ized</u> in that the equipment includes a fan (26) for feeding air into the element (13).
- Equipment according to Claim 10, <u>characterized</u> in that the said fan (26) is preferably the fan of some other device in the vicinity of the equipment, which other device is switched during web threading.
- 10 12. Equipment according to Claim 6, <u>characterized</u> in that an exhaust zone (20) is arranged before each nozzle (12).
- 13. Equipment according to Claim 6 or 12, <u>characterized</u> in that an exhaust channel (21), which is connected to the exhaust zone (20), is arranged in the element (13).
- 14. Equipment according to any of Claims 1 13, <u>characterized</u> in that the nozzle (12) is a gap nozzle (14), which is formed from a blast opening (27) arranged in the base material 20 of the surface (11) of sheet material.
- 15. Equipment according to Claim 14, <u>characterized</u> in that the exhaust zone (20) is formed of one or several exhaust openings (28), the structure of which is arranged to be similar to the structure of the blast opening (27), but the other way round.
